I don't know why, but I always had the impression that making a DIY clock would be really tedious and stressful. Boy was I wrong! This cute, customized photo clock is simple to make in about an hour. Really! It's that easy.
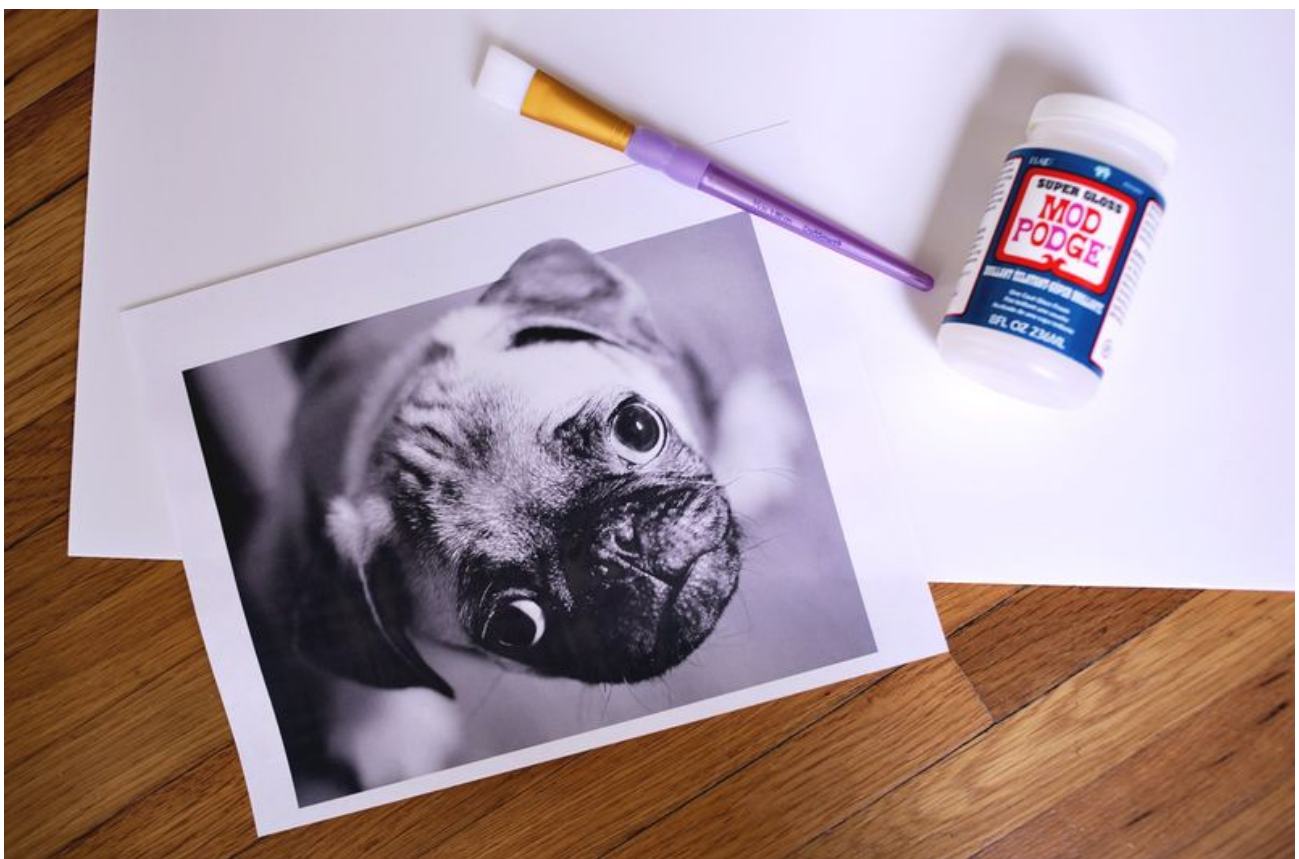

You're going to love it. The idea was a perfect fit for our collaboration with Canon USA, so we used our MG6320 to print that adorable pug picture.

Supply list: Canon Semi-Gloss Photo Paper Plus, glue, clock kit, nail polish, X-Acto knife

Step 1. Print your favorite front facing photo! Be sure to choose a photo that will look nice when cut into a silhouette and will end up 6-8 inches wide.

Step 2. Once printed, glue your photo onto some foam board that is at least an 1/8-inch thick and use an X-Acto knife to cut out the face.

Step 3. Customize the clock arms with nail polish!

Step 4: Assemble the clock. Cut a small hole in the middle of your pet's face and follow the instructions to mount your clock kit (you are just inserting your pet's face where the clock face would usually go). Cut out four small paper dots and glue the dots onto the clock to indicate the noon, three, six, and nine o'clock positions.

All done! Isn't it the cutest? You can use any photo to create this fun and easy clock. These make great gifts! Do you think you'd enjoy making your own?

xoxo. Elsie + Emma
