If you've been following my blog for awhile you know that I'm a big fan of polka dots. I put them on just about anything and everything so when I was looking for a way to add them to my new studio space I had just the idea. I wanted to add them to the door! This project is really quick, affordable, and definitely makes a statement!

## Supplies

[Matte white adhesive vinyl](#)

Cutting machine or a [circle cutter](#)

I started as I do in most things with a mock up that was to scale in Adobe Illustrator. I do this often before starting projects because it's a quick way to see if the scale of something is going to work. After doing a mock up with 4" and 5" circles I opted to go with 4" circles. I used my [Silhouette Cameo](#) to cut 23, 4" circles out of a roll of [matte white adhesive vinyl](#). Then I used a tape measure and t-square to align the top and bottom rows. After those were up I found the center of the door and applied the center row of dots. I continues with the second row from the top and bottom, making the dots look like a grid. After the grid is up, then it was easy to add the rows of two dots making them more polka dot and less grid like.

Now I kinda want to do this to every door in the house!
